Using Cleaning Solutions

Getting Started

Hard to clean surface

1 INTRODUCTION

A Pressure washer alone is enough to clean most surfaces. Stubborn stains or heavy build-ups of dirt, mold, or mildew sometimes needed the added help of a cleaning detergent for complete removal.

Onboard detergent storage

2 CLEANING SOLUTION INJECTION SYSTEM

Fortunately most pressure washers have a cleaning solution injection system for such applications; some even have onboard detergent storage tanks for added convenience.

Cleaning solution choices

3 MANY CHOICES FOR CLEANING SOLUTIONS

There are several brands and types of cleaning solutions on the market today, which ever you choose make sure it's designed for use in a pressure washer, it should say so right on the label. If it does not say it don't use it.

Don't use bleach

4 NEVER USE BLEACH

Never use bleach or bleach based products as they can damage your pressure washer's pump and kill vegetation. Cleaning solutions come in both ready to use and concentrated formulas. Ready to use solutions can be used right out of their container. Concentrated solutions need to be diluted with water. When using concentrated solutions mix in a new container according to the manufactures directions.
