

U Raised Garden

The U Raised Garden

Kit contains:

- 38 timbers
- 16 2-packs of stacking joints
- 6 4-way joints

Introducing the 'Frame-It-All' U Raised Garden

ECO-friendly

The framework utilizes our Composite Plastic Timbers. Manufactured from 40% wood fiber and 60% recycled polyethylene, the Eco-friendly durable composite wood grain plastic timbers never rot, warp or splinter. The cut to size timbers connect to brackets with our patented Stacking Joints stakes.

Dimensions: 12' x 12' X 12"

Installation Notes:

Before starting to assemble the U Raised Garden, refer to the parts diagram to understand how to screw the brackets onto the timbers. Remove the Stacking joints from the plastic bags and lay out the parts. Each of the joints comprises a stake and two brackets plus screws needed.

Tools Needed:

- Phillips head screwdriver
(electrical or battery operated preferred)
- Hammer

With a screwdriver, (a power driver would be helpful) attach one bracket to each end of each of the Composite Timbers as shown below.

Parts identification & Four-Way Joint:

The Four-Way Joint is comprised of two pieces (A), which when stacked, form the complete bracket (B).

How the Joints Work

Special Instruction for bracketing timbers:

Connect brackets on the following quantity of timbers like the diagram above.

- 22 PB bracketed timbers
- 10 SB bracketed timbers
- 6 FW bracketed timbers

Kind and amount of bracketed timbers for each level:

1st level

- 16 PB bracketed timbers

2nd level

- 6 PB bracketed timbers
- 6 FW bracketed timbers
- 10 SB bracketed timbers

Assembly Instructions

1) Layout the base level of your raised garden in a straight rectangular shape, using 16 (PB) bracketed timbers, insert one Stake through the brackets and into each of the corners to lock all sides in place (Diagram 1, at right).

Diagram 2

2) For the second level, place six 4-way bracketed timbers (FW) on top of the 1st level (see diagram 2), then add parallel-bracketed (PB) timbers as marked on diagram 4.

3) To complete the second level, place the (SB) bracketed timbers with one bracket to complete the rest of the sides and screw the unbracketed timber sides into the channel of the 4-way bracket (see diagram 4).

Diagram 3

Diagram 1

All timbers in Diagram 1 are (PB)

Diagram 4

✦ Joint requires both pieces of 4-way bracket
 ✧ Joint requires one piece of 4-way bracket

4) Insert one Stake through the brackets into the aperture on the top of the stake beneath it to lock the second level in place.

5) Add the Caps to each of the top corner joints to finish off the raised garden. You can also locate Solar Lights (#SL-1025, sold separately) as an added beauty feature, or **frame-it-all's** cold greenhouses, veggie wall or animal barriers.

Garden can also be assembled with fewer sections, such as in the diagram at right.

Note:

If you plan to assemble the Kit for use indoors or on a hard surface, remove (with a hacksaw) the spike of each stake where indicated on the diagram to the left. Use these cut down stakes for the base level of your raised garden.

Do not do this if you are locating the Planter outdoors on soil.
